

Science Project Information

Dear Parents, 

This week, students will begin working on their Science Project. The project is a group activity, and students will complete it together in teams.

- This week (planning phase):

Students will receive the Research Paper to decide which habitat (ocean, forest, or desert) they will explore. As a group, they will plan what they want to include and divide their tasks — for example, one student may bring a small box or poster board, another may bring pictures of animals, and another may bring glue or materials to decorate.

- Next week (starting November 16):

During Science class, students will create their projects in class — putting everything together, writing their facts, and designing their poster, mini magazine, or diorama.

- The following week (starting November 23):

Students will present their projects in groups. Each member will speak briefly about their chosen habitat and describe what they created.

The goal of this project is to encourage teamwork, creativity, and research skills.

Thank you for your cooperation and support!
